Thank you very much for choosing a SEIKO watch. For proper and safe use of your SEIKO watch, please read carefully the instructions in this booklet before using.

Keep this manual handy for easy reference.

※ Length adjustment service for metallic bands is available at the retailer from whom the watch was purchased or SEIKO CUSTOMER SERVICE CENTER. The service may also be available on a chargeable basis.
The service may also be available at other retailers, however, some retailers may not undertake the service.

※ If your watch has a protective film for preventing scratches, make sure to peel it off before using the watch. If the watch is used with the film on it, dirt, sweat, dust, or moisture may be attached to the film and may cause rust.

Handling Cautions

**WARNING**
To indicate the risks of serious consequences such as severe injuries unless the following safety regulations are strictly observed.

- **Immediately stop wearing the watch in following cases.**
  - If the watch body or band becomes edged by corrosion etc.
  - If the pins protrude from the band
  - Immediately consult the retailer from whom the watch was purchased or SEIKO CUSTOMER SERVICE CENTER.

- **Keep the watch and accessories out of the reach of babies and children.**
  Care should be taken to prevent a baby or a child accidentally swallowing the accessories.
  - If a baby or a child swallows the battery or accessories, immediately consult a doctor, as it will be harmful to the health of the baby or child.

- **Do not remove the secondary battery from the watch.**
  - About the secondary battery → POWER SOURCE P144
  - Replacement of the secondary battery requires professional knowledge and skill. Please ask the retailer from whom the watch was purchased for replacement of the secondary battery.
  - Installation of an ordinary silver oxide battery can generate heat that can cause bursting and ignition.

**CAUTIONS**
To indicate the risks of light injuries or material damages unless the following safety regulations are strictly observed.

- **Avoid wearing or storing the watch in the following places.**
  - Places where volatile agents (cosmetics such as polish remover, bug repellent, thinners etc.) are vaporizing.
  - Places where the temperature drops below 5°C or rises above 35°C for a long time.
  - Places of high humidity
  - Places affected by strong magnetism or static electricity.
  - Dusty places
  - Places affected by strong vibrations.

- **If you observe any allergic symptoms or skin irritation**
  Stop wearing the watch immediately and consult a specialist such as a dermatologist or an allergist.

- **Other cautions**
  - Replacement of the metal band requires professional knowledge and skill. Please ask the retailer from whom the watch was purchased for replacement of the metal band.
  - As there is a risk of hand or finger injury and fear of losing parts.
  - Do not disassemble or tamper with the watch.
  - Keep the watch out of the reach of babies and children. Extra care should be taken to avoid risks of any injury or allergic rash or itching that may be caused when they touch the watch.
  - When disposing of used batteries, follow the instructions of your local authorities.
  - If your watch is of the fob or pendant type, the strap or chain attached to the watch may damage your clothes, or injure the hand, neck, or other parts of your body.

---

**WARNING**
Do not use the watch in scuba diving or saturation diving.

The various tightened inspections under simulated harsh environment, which are usually required for watches designed for scuba diving or saturation diving, have not been conducted on this watch. For diving, use special watches for diving.

**CAUTION**
Do not turn or pull out the crown when the watch is wet.

Water may get inside of the watch.
- If the inner surface of the glass is clouded with condensation or water droplets appear inside of the watch for a long time, the water resistant performance of the watch is deteriorated. Immediately consult the retailer from whom the watch was purchased or SEIKO CUSTOMER SERVICE CENTER.

Do not leave moisture, sweat and dirt on the watch for a long time.
Be aware of a risk that a water resistant watch may lessen its water resistant performance because of deterioration of the adhesive on the glass or gasket, or the development of rust on stainless steel.

Do not wear the watch while taking a bath or a sauna.

Steam, soap or some components of a hot spring may accelerate the deterioration of water resistant performance of the watch.

Do not pour running water directly from faucet onto the watch.

The water pressure of tap water from a faucet is high enough to degrade the water resistant performance of a water resistant watch for everyday life.
BEFORE USE

Make sure to keep the watch sufficiently charged

The watch operates while charging electricity by converting light received on the dial to electrical energy. It cannot properly operate unless the remaining energy is sufficient. Place or store in a location receiving light, etc., to sufficiently charge electricity.

- The amount of energy stored in the watch can be checked by the movement of the second hand.
  → CHECKING THE CHARGING STATUS  P.102

- Charging the solar battery
  → How to charge the watch  P.116
  → Standard Charging Time  P.117

To receive radio signals

The watch automatically receives radio signals to adjust the time every day.

Automatic radio signal reception is carried out before two and four o'clock during the night. During this period of time, place the watch in a location that easily receives radio signals without wearing it and do not move it.

→ To improve Radio Signal Reception  P.111

Features

This solar-driven and radio-controlled watch is equipped with a radio signal adjustment function.

- By selecting a time zone or a time difference, the watch can display the local time of the selected area around the world.
- The watch is operated by using “electric energy” which is converted from the light received by the solar panel.
- This watch displays the precise time by receiving radio signals conveying time information. It can receive official standard frequencies from Japan (from either of two transmitting stations), the People’s Republic of China, the United States of America and Germany.

- World Time Function  P.104
  - By selecting a time zone or a time difference, the watch can display the local time of the selected area around the world.
- Radio Signal Receiving Function  P.104
  - This watch adjusts the time and the date precisely by automatically receiving radio signals daily.
  - In addition, radio signals can be forcibly received with manual operation. This watch can receive official standard radio signals from Japan (from 2 transmitting stations), China, U.S.A. and Germany (the transmitting station for receiving radio signals can be selected using world time function).
- Display Function of Radio Signal Reception Level  P.148
  - The movement of the second hand indicates the radio signal reception level during radio signal reception attempts. (Only manual reception)
- Display Function of Radio Signal Reception Results  P.114
  - The movement of the second hand indicates radio signal reception results (Yes/No).
- Solar Charging Function  P.116
- Energy Depletion Forecasting Function  P.118
  - A solar cell underneath the dial converts any form of light into “electrical energy” to charge it. Once fully charged, the watch continues to run for approximately six months.
- Power Save Function  P.119
  - The movement of the second hand indicates that the battery should be charged.
- Automatic Hand Position Alignment Function  P.156
  - This watch is equipped with a function which can suppress energy consumption when it is left without receiving an adequate light source for a certain length of time.
  - When the hand positions display an incorrect time as a result of external influences such as magnetism, the watch automatically corrects the hand misalignment.
Display and button operation

**Button** → P.100

*The operation method of the button varies with the functions being used. Follow the instructions of each section of this booklet.*

**Crown**
- Normal position: Checking the reception result P.114
- Time difference setting P.124
- Manual reception P.148
- Manual time setting P.151

First click: Manual date setting P.154
Second click: Resetting the system P.166

Reception level display
- [Manual reception] H ─ High reception level (50 second position)
- L ─ Low reception level (40 second position)
- N ─ Unable to receive radio signals (20 second position)

Radio signal transmitting station display
- [Time zone display] (or Time Difference Display)
- City names: +25 regions around the world
- How to select the time zone P.122
- How to set the time difference P.124

Time Zone Display
- Display position:
  - J / JY (Japan) 23 second position
  - B / BPC (China) 31 second position
  - W / WWVB (U.S.A.) 43 second position
  - D / OCF F (Germany) 3 second position

Reception result display
- [Check of reception result] Y ─ Reception successful (10 second position)
- N ─ Reception failed (20 second position)

*Each indication may differ depending on the model (design) of the watch.*

HOW TO USE THE BUTTON

Some models may have a Button which is recessed in the watch case to prevent accidental input. Shape of the Button differs depending on the design of the watch.

- Upper half of the Button is covered.
- The Button is covered except the hollow in the middle.
- Press the lower half of the Button or press the hollow using an object with a long tapered tip.

CROWN

There are two types of crown, a normal crown and a screw-lock type crown. Please check the type of the crown of your watch.

**Normal crown**
- Pull out the crown and operate it.

**Screw-lock type crown**
- Unlock the crown before operating it.
- After operating the crown, lock it. While pressing the crown in we will not be turned any further.

*If your watch has a screw-lock type crown, the crown screws into the watch to prevent malfunction and increase water resistance.*
*Be careful not to screw the crown in by force as it may damage the slots of the crown.*
### Before Use

#### Checking the Charging Status

When the movement of the second hand shows an energy depletion state, the battery requires charging.

- The second hand moves at one-second intervals.
- The second hand moves at two-second intervals.
- The second hand moves at five-second intervals.
- The second hand is stopped.

The charged energy is depleted. → P.118

Check the movements of the second hand after releasing the Power Save mode.

The energy stored in the watch runs low. → P.118

---

### Checking the time and date

- The hands of this watch cannot be moved by turning the crown. So when adjusting the time and date, refer to the following pages regarding the procedures.

- When the time and date are correct
  - Use the watch without adjustment.
  - When the radio signal can be received
    - Setting the time and date by receiving a radio signal → P.148
    - Radio signal reception range indication
      - Environments in which it is difficult to receive a radio signal → P.112

- When the time and date are incorrect
  - Check the time zone or time difference. → P.122, 124
  - When a radio signal cannot be received
    - Manually set the time → P.151
    - Manually set the date → P.154

---

### Setting the Time and Date by Receiving a Radio Signal

#### Mechanism of radio signal reception

The radio-controlled watch displays the precise Time and Date by automatically receiving and synchronizing itself with the radio signal of an official standard frequency.

- Time signal transmitted by a standard frequency is based on a super accurate "Cesium Atomic Clock" that may have a 1 second loss or gain per one hundred thousand years.

---

### Automatic reception and manual reception

- **Automatic reception**
  - This watch sets the time and date by automatically receiving a radio signal at a fixed time. This watch automatically receives a radio signal before 2:00 a.m. and 4:00 a.m.
  - When the reception is successful, the watch finishes the automatic reception.

  - Place the watch in a place where it can easily receive a radio signal (by the window, etc.)
  - Do not move the watch during the radio signal reception.

  → To Improve Radio Signal Reception P.111

- **Manual reception**
  - This watch can receive a radio signal arbitrarily at any time other than the automatic reception mode.
  - How to conduct manual reception P.148

  - Radio signal reception results depend on a receiving environment. → Environments in which it is difficult to receive a radio signal P.112
  - The watch cannot receive a radio signal outside the radio signal reception range. → Radio signal reception range indication P.106
  - If the time zone or time difference is set to a region other than Japan, China, the U.S.A, or Germany, the signal reception function will not work. → Time Zone Display and Time Difference Table P.126
  - When the watch does not display the correct time and date even after successfully receiving a radio signal. → Troubleshooting: Misalignment of the time and hands P.162, Misalignment of date P.164
Reception environment

Radio signal reception range indication
This watch receives standard radio signals from Japan (2 stations), China, U.S.A. and Germany. When you set the watch to a time zone in Japan, China, U.S.A. or Germany, the official standard frequencies the watch receives will be automatically changed accordingly to the selected time zone. - How To Set the Time Zone P.122
- How to set the time difference P.134
※ Each indication may differ depending on the model (design) of the watch.

Radio signal reception range: Japan (JJY)
The reception range from each transmitting station is approximately 1,000 km (1,000 km radius of each station).
JJY is operated by the National Institute of Information and Communications Technology (NICT).
JJY is transmitted from two stations in Japan. Each station transmits JJY in a different frequency.
Fukushina (Ohtakadoya-yama transmitting station: 40 kHz)
Kyushu (Hagane-yama transmitting station: 60 kHz)
※ NICT: National Institute of Information and Communications Technology
※ Whether the watch succeeds in receiving radio signals or not depends on the receiving conditions.
※ Environment in which it is difficult to receive a radio signal P.112

Radio signal reception range: the People's Republic of China (BPC)
The reception range from the transmitting station is approximately 1,500 km (1,500 km radius of the transmitting station).
BPC is operated by NTSC.
Shangdu National Time Service Center
※ NTSC: National Time Service Center
※ The watch may be able to receive radio signals outside a reception range if the receiving conditions are favorable.
※ The watch may fail to receive radio signals depending on the reception conditions (weather, geographic locations, radio disturbances such as tall buildings, and orientation of the watch).
※ Environments in which it is difficult to receive a radio signal P.112

Radio signal reception range: the United States of America (WWVB)
The reception range from the transmitting station is approximately 1,500 km (1,500 km radius of the transmitting station). There are four time zones within the reception range.
WWVB is operated by NIST.
Fort Collins transmitting station
※ NIST: National Institute of Standards and Technology
※ The watch may be able to receive radio signals outside a reception range if the receiving conditions are favorable.
※ The watch may fail to receive radio signals depending on the reception conditions (weather, geographic locations, radio disturbances such as tall buildings, and orientation of the watch).
※ Environments in which it is difficult to receive a radio signal P.112
Radio signal reception range: Germany (DCF77)
The reception range from the transmitting station is approximately 1,000km (1,000km radius of the transmitting station).
There are three time zones within the reception range.

DCF77 is operated by PTB, Southeastern Frankfurt
Mainfingen transmitting station: 77.5 kHz
PTB: Physikalisch-Technische Bundesanstalt
- The watch may fail to receive radio signals depending on the reception conditions (weather, geographic locations, radio disturbances such as tall buildings, and orientation of the watch).
- Environments in which it is difficult to receive a radio signal: P.112

To Improve Radio Signal Reception
- Place the watch in a place where it can easily receive a radio signal such as near a window.
The antenna is embedded at the 8 o’clock position of the watch. Turning the antenna toward the outside of a window or the direction facing transmitting stations helps improve radio signal reception.
- Locations of transmitting stations → Radio Signal Reception Range Indication P.106

- Do not move the watch while it is receiving radio signals.
To enhance the reception of radio signals, do not move the watch or do not change the orientation of the watch while it is receiving radio signals.
- If the button or crown is operated while the watch is receiving a radio signal, the reception will be cancelled.

Environments in which it is Difficult to Receive a Radio Signal
- Avoid putting the watch in such places when it receives radio signals.
- Close to home electrical appliances such as TV’s, refrigerators or air conditioners
- Close to S.A devices such as mobile phones, personal computers or food machines
- Close to steel desks or other furniture made of metal

Avoid putting the watch in such places when it receives radio signals.
- In places generating radio interference, such as construction sites or places with heavy traffic.
- Close to overhead power lines, TV stations, train cables.
- Inside a building, between tall buildings, underground.
- Inside a vehicle, train, or airplane

CAUTION
- The watch may display the wrong time if it fails to receive radio signals properly because of interference. The watch may also fail to receive radio signals properly depending on the location or radio wave receiving conditions. In this case, move the watch to another place where it can receive radio signals.
- When the watch is out of reception range, its accurate quartz movement (loss / gain: ±15 seconds per month on average) will continue to keep the time.
- The time signal transmission may be stopped during maintenance of the facilities of the (each) transmitting station or because of a lightning strike. In such a case, see the (each) station’s website for further information or contact SEIKO CUSTOMER SERVICE CENTER.

- Websites of transmitting stations (as of January 2017)
  Japan: NICT (Japan Standard Time Group) http://www.iji.nict.go.jp/
  China: NTSC http://www.ntsc.ac.cn
**How to Display the Reception Results**

The second hand indicates the latest reception results (Yes/No) of a radio signal for five seconds.

1. Press the Button once and then release it.

   - The second hand indicates the reception results.

2. Check if the reception was successful (within five seconds).

   - If a reception was successful: The second hand points to Y (Yes: the 10-second position)
   - If a reception has failed: The second hand points to N (No: the 20-second position)

   - Press the button once and then release it.

   - When the button is not pressed, the watch enters the time zone adjustment mode or time difference setting mode.

**About Charging**

**How to Charge the Watch**

Expose the dial to light to charge the watch.

Under the following situations, the energy of the watch is likely to be depleted, resulting in stoppage of the watch:
- When charging the watch, make sure that the watch is not heated to a high temperature. (The operational temperature range is between –10 °C and +60 °C.)
- When first using the watch or starting to use the watch after it has stopped because of the energy depletion, sufficiently charge the watch referring to the table on the page at the right.

**Standard Charging Time**

For an approximate time required to charge the watch, refer to the table below.

<table>
<thead>
<tr>
<th>Illumination (lx)</th>
<th>Light source</th>
<th>Condition (Example)</th>
<th>From the state where the watch is stopped (not charged)</th>
<th>To fully charged</th>
<th>To 1sec. Interval movement is secured</th>
<th>To move for 1 day</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

The figures of "Time required for charging the watch to start moving at one-second intervals" are estimations of time required to charge the stopped watch by exposing it to light until it moves at steady one-second intervals. Even if the watch is partially charged for a shorter period, the watch will resume one-second-interval movement. However, it may shortly return to two-second-interval movement. Use the charging time in this column as a rough guide for sufficient charging time.
- The second hand movement indicates the remaining amount of energy.
- The required charging time slightly varies depending on the model of the watch.

**If a reception was successful:** The second hand points to Y
- A radio signal has been received successfully. Use the watch without any adjustments.
  - In this case, refer to Troubleshooting: Misalignment of the time and hands P.162 and Misalignment of the date P.164.

**If a reception has failed:** The second hand points to N.
- Place the watch in a place where it can easily receive a radio signal, or change its direction.
  - Even within the radio signal reception range, this watch may fail to receive a radio signal depending on the condition (due to the influence of weather, geographical features, buildings, or direction).
  - Environments in which it is difficult to receive a radio signal P.112
  - This watch is unable to receive radio signals outside a reception range
  - Radio signal reception range indication P.106
  - Before trying to receive radio signals, check the time zone or time difference.
  - If the time zone or time difference is set to a region other than Japan, China, the U.S.A. or Germany, the signal reception function will not work.
  - Check the time zone setting → How to select the time zone → P.122
  - How to set the time difference → P.124
  - Attempt to receive a radio signal in a different time period (In the case of manual reception).

Receiving environments differ according to time periods even at the same place.
- Due to radio signal characteristics, the watch is able to easily receive radio signals during nighttime hours.
- If you use the watch in a place or region outside the radio signal reception range or when the watch cannot successfully receive radio signals, manually set the time and date.
  - How to manually set the time → P.151
  - How to manually set the date → P.154
About Energy

- Energy Depletion Forewarning Function
  The energy depletion forewarning function is activated when the energy stored in the watch runs low. In such a case, the second hand moves at two-second intervals. If the watch continues to be in the state of two-second interval movement, the watch switches to five-second interval movement, followed by a completely stopped state. If the energy depletion forewarning function is activated, charge the watch sufficiently.

How to Charge the Watch

- Standard Charging Time

  4. Neither the buttons nor the crown can be operated while the second hand moves at two-second or five-second intervals (this is not a malfunction).
  4. While the second hand moves at five-second intervals, the hour hand and date stop operating.
  4. While the second hand moves at two-second and five-second intervals, the watch is unable to receive radio signals automatically. After the watch is charged sufficiently and the second hand returns to normal one-second interval movement, conduct the normal reception of radio signals to set the watch to the correct time. (Automatic Reception and Manual Reception → P.105)

Power Save Function

This watch is equipped with a power save function which can suppress energy consumption when it is left without receiving an adequate light source for a certain length of time.

There are two types of power save mode.

- Power Save 1
  - When the watch is exposed to a state without receiving an adequate light source for 72 hours or longer.
  - The watch stops at the 18-second position, and the hour and minute hand, and date also stop.
  - The watch conducts automatic radio signal receiving.

- Power Save 2
  - When the watch is in an insufficient charging state for a long time.
  - The second hand stops pointing at the 46-second position, and the hour and minute hand, and date also stop.
  - The watch does not conduct automatic radio signal receiving.

How to handle the situation

1. After sufficiently charging the battery, set the watch for the current time, if necessary.

Example: How to display the local time in Honolulu (How to select the time zone of HNL (Honolulu) or how to set the time difference to “-9”)

When the time zone is selected, the date is automatically adjusted in conjunction with the hour hand.

- Before time zone setting

  Local time in Japan: 6th, 10 o’clock 8 minutes and 42 seconds
  Local time in Honolulu: 5th, 15 o’clock 8 minutes and 42 seconds

- After time zone setting

  Local time in Japan: 5th, 2 o’clock 42 seconds
How to select the time zone (How to display the local time around the world)

1. Continue to press the button (for 3 seconds), and when the second hand starts to move counterclockwise, release it.

   The watch switches to the time zone adjustment mode and stops by the time zone set currently.

   Press the button for 3 seconds and then release it.

   ※ When a no movement state of the second hand is kept for one minute or more, the watch automatically switches to the time display mode. When the watch switches to the time display mode, re-attempt operation.

2. Press the button to set the second hand to the local time zone of a desired area.

   With each pressing of the button, the second hand moves in a clockwise way to the adjacent time zone index.

   The position of second hand indicates the time zone. Refer to the figures at the right to set the time zone.

   If you continue to press the button for more than 3 seconds, the second hand will fast forward to stop fast forward press the button again.

   ※ Also while the watch is working, the second hand can be moved.

※ For a model (design) having the time zone indications

The radio signal transmitting station can be changed by selecting the time zone. When selecting a time zone for regions other than the radio signal reception ranges, the radio signal reception function will not work.

1. Wait for one minute after the hour hand stops. (The time zone adjustment mode is finished)

   After one minute, the watch switches to the one-second interval movement.

   ※ When the date is changed, it is also moved.

How to set the time difference (How to display the local time around the world)

1. Continue to press the button (for 3 seconds), and when the second hand starts to move counterclockwise, release it.

   The watch enters the time difference setting mode and the second hand stops pointing at the time difference index currently set.

   Press the button for 3 seconds and then release it.

   ※ When a no movement state of the second hand is kept for one minute or more, the watch automatically switches to the time display mode. When the watch switches to the time display mode, re-attempt operation.

2. Press the button to set the second hand to point at the time difference index of the target area.

   With each pressing of the button, the second hand moves to the next time difference index in the clockwise direction.

   The position of the second hand indicates the time difference. Refer to the figures at the right to set the time difference.

   If you continue to press the button for more than 3 seconds, the second hand will fast forward. To stop fast forward press the button again.

   ※ Also while the watch is working, the second hand can be moved.

※ For a model (design) having the time difference indications

The radio signal transmitting station can be changed by setting the time difference. Setting a time difference for regions other than the radio signal reception ranges, the radio signal reception function will not work.

1. Wait for one minute after the hour hand stops. (The watch exits the time difference setting mode)

   After one minute, the watch switches to the one-second interval movement.

   ※ When the date is changed, it is also moved.
Time zone display and time difference table

In the time zone adjustment mode or time difference setting mode, set the second hand to point at the time zone index or time difference index of the target area referring to the table below. To set the Daylight Saving Time (DST), set the second hand to point at the time zone index or time difference index next to the target area in the clockwise direction (+ 1 hour).

What is a time zone?

Based on Coordinated Universal Time (UTC), the standard time commonly used is adopted by countries and regions around the world. The standard time is determined by each country or region, and the region where the same standard time is adopted is referred to as the time zone. Further, Daylight Saving Time (DST) is individually adopted in countries and regions.

[What is UTC (Coordinated Universal Time)?]
UTC is the universal standard time coordinated through international agreement. It is used as the official time around the world. UTC is determined by adding a leap second to GMT (Greenwich Mean Time), which is determined through astronomical measurement, in order to keep the precise time.

[What is summer time (DST)?]
Summer time is daylight saving time. Advancing the watch one hour to prolong daylight during longer daylight hours in summer. The adoption and duration of Daylight Saving Time (DST) vary depending on the country.

Q&A for the world time function

Q: Will the watch be automatically set to the local time when it is moved to a place outside Japan in a different time zone?
A: The watch will not be automatically set to the local time if it is just moved to a place outside Japan in a different time zone. When traveling outside your home time zone, select the time zone or set the time difference of your current location. By selecting the time zone or by setting the time difference of your current location, the watch automatically displays the local time of your current location. (The time difference can be set in one-hour increments.)

A: After the time zone is selected or the time difference is set, the watch can display the precise time by receiving radio signals, provided that the watch is within the radio signal reception range.
B: The watch automatically displays the local time of your current location.
C: After selecting the time zone, radio signal reception is not performed. When wearing a watch in Japan, set to Japan time by use of the time zone adjustment function.

Q: When returning to Japan from overseas, is the time automatically set to Japan time?
A: Just moving cannot adjust the Japanese local time. After selecting the time zone, radio signal reception is not performed. When wearing a watch in Japan, set to Japan time by use of the time zone adjustment function.

Q: During question of time zone selection or time difference setting, the hands of the watch do not move. Does this cause the watch to display the wrong time?
A: The internal circuit stores the time, therefore, no time lag occurs.

Q: When the time zone or time difference is set to a region outside the radio signal reception range, the watch cannot receive radio signals. How does this affect the accuracy of the watch?
A: The watch has an accuracy of a normal quartz watch in that case. (Monthly rate: ±15 seconds)

Q: How can I set the watch to display the local time in a region with 15-minute or 30-minute offsets from UTC?
A: The time can be adjusted on a 1-hour basis by use of the time difference adjustment function.

When adjusting to a local time with a time difference of 15 minutes or 30 minutes. → How to manually set the time: [15]
Daily care

- The watch requires good daily care
  - Do not wash the watch when its crown is at the extended position.
  - Wipe away moisture, sweat or dirt with a soft cloth
  - After soaking the watch in seawater, be sure to wash the watch in clean pure water and wipe it dry carefully.
  - If your watch is rated as "Non-water resistant" or "water resistant for everyday life," do not wash the watch. Do not pour running water directly from faucet onto the watch.
  - Put some water into a bowl first, and then soak the watch in the water to wash it.
  - Performance and type → P.131
  - Water resistance → P.132

- Turn the crown from time to time
  - In order to prevent corrosion of the crown, turn the crown from time to time.
  - The same practice should be applied to a screw-lock type crown.

- Press the buttons once in a while
  - Press the buttons once in a while to prevent corrosion of the buttons.
  - If the display is changed by pressing any button, wait and leave it as is.

Performance and type

The case back shows the caliber and performance of your watch

<table>
<thead>
<tr>

<td>The watch is suitable for sports such as swimming.</td>
</tr>
<tr>
<td>Water resistance for everyday life at 10(20) barometric pressures</td>
<td>The watch is suitable for diving not using an air cylinder.</td>
</tr>
</tbody>
</table>

Water Resistance

Refer to the table below for the description of each degree of water resistant performance of your watch before using.

(Refer to "P.131")
## Magnetic resistance

Affected by nearby magnetism, a watch may temporarily gain or lose time or stop operating.

If the watch becomes magnetized and its accuracy deteriorates to an extent exceeding the specified rate under normal use, the watch needs to be demagnetized. In this case, you will be charged for demagnetization and accuracy readjustment even if it happens within the guarantee period.

The reason why watch is affected by magnetism.

The built-in motor is provided with a magnet, which may be influenced by a strong external magnetic field.

### Table: Indication on the case back vs Condition of use

<table>
<thead>
<tr>
<th>Indication on the case back</th>
<th>Condition of use</th>
</tr>
</thead>
<tbody>
<tr>
<td>No indication</td>
<td>Keep the watch more than 10 cm away from magnetic products.</td>
</tr>
<tr>
<td>＿＿</td>
<td>Keep the watch more than 5 cm away from magnetic products. (JIS level-1 standard)</td>
</tr>
<tr>
<td>＿＿</td>
<td>Keep the watch more than 1 cm away from magnetic products. (JIS level-2 standard)</td>
</tr>
</tbody>
</table>

### Examples of common magnetic products that may affect watches

- Smartphone, cellular phone, tablet terminal (speaker)
- AC adapter
- Bag (with magnet buckle)
- AC-powered shaver
- Magnetic cooking device
- Portable radio (speaker)
- Magnetic necklace
- Magnetic heat pillow

## Band

The band touches the skin directly and becomes dirty with sweat or dust. Therefore, lack of care may accelerate deterioration of the band or cause skin irritation or stain on the sleeve edge. The watch requires a lot of attention for long usage.

### Metallic band
- Moisture, sweat or soil will cause rust even on a stainless steel band if they are left for a long time.
- Lack of care may cause a yellowish or gold stain on the lower sleeve edge of shirts.
- Wipe off moisture, sweat or soil with a soft cloth as soon as possible.
- To clean the soil around the joint gaps of the band, wipe it out in water and then brush it off with a soft toothbrush.
- Protect the watch body from water splashes by wrapping it up in plastic wrap etc.
- Because some titanium bracelets use pins made of stainless steel, which has outstanding strength, rust may form in the stainless steel parts.
- If rust advances, pins may poke out or drop out, and the watch case may fall off the bracelet, or the clasp may not open.
- If a pin is poking out, personal injury may result. In such a case, refrain from using the watch and request repair.

### Polyurethane band
- A polyurethane band is susceptible to deterioration from light, and may be deteriorated by solvent or atmospheric humidity.
- Especially a translucent, white, or pastel-colored band easily adsorbs other colors, resulting in color stains or discoloration.
- Wash out dirt in water and clean it off with a dry cloth.
- Protect the watch body from water splashes by wrapping it up in plastic wrap etc.
- When the band becomes less flexible, have the band replaced with a new one. If you continue to use the band as it is, the band may develop cracks or become brittle over time.

### Notes on skin irritation and allergy

Skin irritation caused by a band has various reasons such as allergy to metals or leathers, or skin reactions against friction on dust or the band itself.

### Notes on the length of the band

Adjust the band to allow a little clearance with your wrist to ensure proper airflow. When wearing the watch, leave enough room to insert a finger between the band and your wrist.
Special clasps

There are 3 types of special clasps as described below; If the clasp of the watch you purchased is one of them, please refer to the indications.

A Type → P.139

B Type → P.140

C Type → P.142

A Type

1. Lift up the clasp to release the buckle.
2. Open the flap.
3. Take the pin out of the adjustment hole. Adjust the size of the strap by sliding it back and forth, and then put the pin back into the appropriate adjustment hole.
4. Close the flap. ※ Do not push the flap in too hard.

※ When fastening the clasp, insert the tip of the band into the movable loop and fixed loop, and then, securely tighten the clasp.

B Type

- How to wear or take off the watch

1. While pressing the push button on both sides of the flap, pull the band out of the movable loop and fixed loop. Then open the clasp.
2. Place the tip of the band into the movable loop and fixed loop, and fasten the clasp by pressing the frame of the buckle.

How to adjust the length of the leather band

1. While pressing the push button on both sides of the flap, pull the leather band out of the movable loop and fixed loop. Then open the clasp.
2. Press the push buttons again to unfasten the flap.
3. Pull the pin out of an adjustment hole of the band. Slide the band to adjust its length and find an appropriate hole. Place the pin into the hole.
4. Fasten the flap.
### Power Source

The battery used in this watch is a special secondary battery, which is totally different from ordinary silver oxide batteries.

Unlike other disposable batteries such as dry-cell batteries or button cells, this secondary battery can be used over and over again by repeating the cycles of discharging and recharging. However, for various reasons such as long-term use or usage conditions, the capacity or recharging efficiency of the secondary battery may gradually deteriorate. Worn or contaminated mechanical parts or degraded oils may also shorten recharging cycles. If the efficiency of the secondary battery decreases, have the watch repaired.

#### Remarks on replacing the secondary battery
- Do not remove the secondary battery yourself.
- Replacement of the secondary battery requires professional knowledge and skill. Please ask the retailer from whom the watch was purchased for repair.
- Installation of an ordinary silver oxide battery can generate heat that can cause bursting or ignition.

### Lumibrite

#### If your watch has Lumibrite

Lumibrite is a luminous paint that absorbs the light energy of the sunlight and lighting apparatus in a short time and stores it to emit light in the dark.

For example, if exposed to a light of more than 500 lux for approximately 10 minutes, Lumibrite can emit light for 3 to 5 hours. Please note, however, that, as Lumibrite emits the light it stores, the luminance level of the light decreases gradually over time. The duration of the emitted light may also differ slightly depending on such factors as the brightness of the place where the watch is exposed to light and the distance from the light source to the watch.

- In general, when coming from a place that is bright to a place that is dark, it takes human eyes some time to adapt to the darkness making it difficult to see objects initially. (Dark adaptation)
- Lumibrite is luminous paint that stores and emits light, which is harmless to human beings and the environment, containing no toxic materials such as radioactive substances.

</tr>
</tbody>
</table>

#### Overcharge prevention function

When the secondary battery is fully charged, the overcharge prevention function is automatically activated to avoid further charging. There is no need to worry about damage caused by overcharging no matter how much the secondary battery is charged in excess of the "time required for fully charging the watch".

- Refer to "Standard charging time" on P.117 to check the time required for fully charging the watch.
After-sales service

= Notes on guarantee and repair
- Contact the retailer from whom the watch was purchased or SEIKO CUSTOMER SERVICE CENTER for repair or overhaul.
- Within the guarantee period, present the certificate of guarantee to receive repair services.
- Guarantee coverage is provided in the certificate of guarantee. Read carefully and retain it.
- For repair services after the guarantee period has expired, if the functions of the watch can be restored by repair work, we will undertake repair services upon request and payment.

= Replacement parts
- SEIKO makes it a policy to typically keep a stock of replacement parts for this watch for 7 years. Replacement parts are those which are essential to maintaining the functional integrity of the watch. Please keep in mind that if original parts are not available, they may be replaced with substitutes whose outward appearance may differ from the originals.

How to conduct manual reception (Receiving a radio signal manually)

1. Place the watch.
Place the watch where it can easily receive a radio signal.

2. Continue to press the button (for 8 seconds), then release it when the second hand moves to the zero second position.
Reception starts after the second hand moves and stops at the zero second position.

Troubleshooting
- To enable the watch to easily receive a radio signal P.111
- Environments in which it is difficult to receive a radio signal P.112
- The watch cannot receive a radio signal outside the radio signal reception range.
- Radio signal reception range indication P.106

Troubleshooting

3. Place the watch and wait for a few minutes (max. 12 minutes)
When the second hand moves at the one-second interval, the reception is finished.
It takes time to receive a radio signal (max. 12 minutes).
- The required time varies depending on the receiving state of a radio signal.

<Display until the reception is finished>
The second hand indicates the reception level.

Reception level | High : H | Low : L

Display

| Receiving state of a radio signal | Easy to receive | Difficult to receive |

4. When the second hand starts to move at one-second intervals, check that the reception is successful.
When the reception is finished, check that the reception is successful.
- Reception result display P.114

<If the reception has failed>
The second hand indicates the reception result “N”.

Reception result : N

After 5 seconds, the watch switches to the time display mode.
- When the reception result is “N” P.115

= Inspection and adjustment by disassembly and cleaning (overhaul)
- Periodic inspection and adjustment by disassembly and cleaning (overhaul) is recommended approximately once every 3 to 4 years in order to maintain optimal performance of the watch for a long time. According to use conditions, the oil retaining condition of your watch mechanical parts may deteriorate, abrasion of the parts due to contamination of oil may advance or delay the time significantly, or the watch itself may stop. As the parts such as gasket may deteriorate, water-resistant performance may be impaired due to intrusion of perspiration and moisture. Please contact the retailer from whom the watch was purchased for inspection and adjustment by disassembly and cleaning (overhaul). For replacement of parts, please specify "SEIKO GENUINE PARTS." When asking for inspection and adjustment by disassembly and cleaning (overhaul), make sure that the gasket and push pin are also replaced with new ones. When your watch is inspected and adjusted by disassembly and cleaning (overhauled), the movement of your watch may be replaced.
When a radio signal cannot be received

When a radio signal cannot be received, refer to the following pages:

- Not receivable within the radio signal reception range
  Check that the time zone of the area where the watch is used is set. Although the time zone is correctly selected, the time and date are misaligned.
  - At trouble: Reception of a radio signal P.160
    Since a radio signal cannot be received, the time and date became misaligned. In this case, set the time and date manually.
  - How to manually set the date P.154
  - For the radio signal reception ranges, refer to “Radio signal reception range indication P.106.”

- When the watch is used outside the radio signal reception range
  Select the time zone of the area where the watch is used.
  - How to select the time zone (How to display the local time around the world) P.122
  - How to set the time difference P.124
  Although the time zone is correctly selected, the time and date are not correct. In this case, set the time and date manually.

How to manually set the time

If the watch is continually used in an environment in which a radio signal cannot be received (a region other than the radio signal reception ranges, etc.), set the time manually.

- Radio signal reception range indication P.106

- When the watch is used in an environment in which a radio signal can be received again, receive a radio signal to set the time.
  - Automatic reception and manual reception P.105

- Even if a radio signal cannot be received, the watch can be used with the same accuracy as that of a normal quartz watch. (Average gain/loss ±15 seconds per month)
- When a radio signal is received after the time is manually set, the received time is displayed.

1 Pull the crown to the second click and push it back in.

Pull the crown to the second click and push it back in.

- When pulling the crown, do not stop at the first click but pull it to the second click immediately. If the second hand does not stop when pushing the crown back in, re-attempt operation.

Troubleshooting

2 Press the button and then release it

The second hand moves to the zero second position and stops.

The watch switches to the manual time setting mode.

3 Press the button to set the time

By pressing the button once, the second hand makes a full rotation and the watch advances the time by one minute.

- The hands do not move by turning the crown.
- Advance the hand to set the time. The hand cannot be turned reversely.
- The date is changed at 0:00 a.m. (12:00 a.m.). Pay attention to a.m. and p.m. to set the time.
- The date cannot be set in this operation.
  - How to manually set the date P.154

4 After the operation 3 pull the crown to the second click.

5 Push the crown back in according to the time signal, etc.

The operation is completed. The watch starts to work.

The second hand stops.

- When the crown is a screw lock type, unlock it. → P.101
- When the crown is a screw lock type, unlock it. → P.101

Continue to the next page

Troubleshooting

When the watch is used in an environment in which a radio signal can be received again, receive a radio signal to set the time.

- Automatic reception and manual reception P.105

Troubleshooting

When the watch is used in an environment in which a radio signal can be received again, receive a radio signal to set the time.

- Automatic reception and manual reception P.105

Troubleshooting

When the watch is used in an environment in which a radio signal can be received again, receive a radio signal to set the time.

- Automatic reception and manual reception P.105

Troubleshooting
How to manually set the date
When the date is not changed automatically due to an environment in which a radio signal cannot be received outside the radio signal reception range, etc. (when changing from a month with 30 days or less to a month with 31 days), set the date manually.
- The date can be set independently regardless of the time.
- When the watch is used in an environment in which a radio signal can be received again, receive a radio signal to set the time.
→ Automatic reception and manual reception P.105
※ When the date is not correct even if the radio signal reception is successful, the preliminary position of the date may be misaligned.
※ In case of an abnormal movement P.166

Pull the crown to the first click
The watch switches to the manual date setting mode. (The watch is working.)
※ When the crown is a screw lock type, unlock it. → P.101
※ When the crown is pulled to the first click, the second hand advances 15 seconds and then moves back. Continue to conduct the operation.

Press the button to set the date
By pressing the button once, the hour hand turns twice and the watch advances the date by one day.
※ The date is not changed by turning the crown.
※ Set the date by advancing the date. The date cannot be reversely moved.

Push the crown back in.
The operation is completed.

Preliminary position
When the date and time are not correct even if the radio signal reception is successful, the preliminary position of the date may be misaligned.
The possible causes of misalignment of preliminary position are as follows:
- In the case of having a strong impact: the misalignment may occur when dropping or hitting the watch.
- In the case of a magnetic influence: the misalignment may occur when bringing the watch close to an object which generates magnetism.
→ Examples of magnetic products that may affect watches P.135
The condition “the preliminary position of hand is misaligned” means that compared to a health meter, “the zero position of a meter is misaligned, causing a correct weight not to be displayed.”

Automatic Hand Position Adjustment Function (Function to automatically adjust the preliminary position of the hour, minute, and second hands)
The hour, minute, and second hands have an “Automatic Hand Position Adjustment Function,” which automatically corrects an incorrect preliminary position.
Automatic Hand Position Adjustment Function activates once an hour for the minute and second hands and at 12:00 both for AM and PM for the hour hand.
※ This function works when the preliminary hand position is misaligned due to external factors such as strong impact or magnetic influence. It does not work to adjust accuracy of the watch or slight deviations which may occur during the manufacturing process.

Preliminary position adjustment of the date
Since the preliminary position of the date is not adjusted, it is necessary to align the position manually.
To adjust the preliminary position, reset the system.
→ In case of an abnormal movement P.166

In case of an abnormal movement

In case that the watch moves abnormally or that the watch does not move at one-second intervals even after fully charging the battery, perform the procedures from ① - ④ for normal function.

■ Reset the system (① - ②)

① Pull the crown to the second click

❖ When the crown is a screw lock type, unlock it. → P.101
❖ Even after pulling the crown, the second hand continues to move.

② Press the button for 5 seconds and then release it

❖ In five seconds after releasing the button, the hour hand starts to move and stops at the 12 o’clock position. And then the minute hand and the second hand start to move and stop at the zero second position.
❖ The button cannot be operated until all the hands stop.

Preliminary position adjustment of the date: adjust to “1 (first day)” (③ - ④)

③ Press the button to set the date to “1”

❖ Adjust the date so that the number “1” will be displayed in the date window.
❖ By pressing the button once, the hour hand makes two full rotations and the watch advances the date by one day.
❖ After the hour hand stops, press the button.
❖ The number may be displayed out of the center of the date window. After the preliminary position adjustment is finished, it is displayed at the center of the date window.
❖ The hands do not move by turning the crown.
❖ Do not continue to press the button. Even if continuing to press the button, the date is not changed consecutively.
❖ Since continuous pressing returns the operation to ②, do not continue to press the button.

④ Push the crown back in

❖ When the crown is pushed back in, the watch starts to work from 00:00:00.
❖ Since continuous pressing returns the operation to ②, do not continue to press the button.
❖ When the crown is a screw lock type, lock it. → P.101
How to set the time zone (6 - 6)

After the system is reset, the time zone is set to London.

* If necessary, set the time zone.

5. Continue to press the button (for 3 seconds) and then release it when the second hand starts to move counterclockwise.

The watch enters the time zone adjustment mode or time difference setting mode.

When a no movement state of the second hand is kept for one minute or more, the watch automatically switches to the time display mode. When the watch switches to the time display mode, re-attempt operation from 6.

6. Press the button to set the second hand to point at the time zone index or time difference index of the current location.

With each pressing of the button, the second hand moves to the next time zone index or time difference index in the clockwise direction.

The position of the second hand indicates the time zone or time difference.

- To set the Daylight Saving Time (DST), set the second hand to point at the time zone index or time difference index next to the target time zone in the clockwise direction (+1 hour).

7. Receive a radio signal to set the time and date

One minute after the hour and minute hands stop.

Set the time and date manually in an environment in which a radio signal cannot be received.

→ How to manually set the time P.151
→ How to manually set the date P.154

When the time and date are set, the operations are finished.

Specifications

1. Basic functions: basic watch with 3 hands (hour, minute and second hands), date display, world time function (25 time zones)
2. Frequency of crystal oscillator: 32.768Hz (Hz = Hertz, cycles per second)
3. Loss/gain (per month): Loss/gain ±15 seconds in a monthly rate (except the cases when the watch is used without time adjustment by receiving a radio signal, or when it is worn on the wrist within a normal temperature range between 5°C and 35°C)
4. Operational temperature range: Between −10°C and +60°C
5. Driving system: Step motor type (hour, minute and second hands and the date)
6. Power source: special secondary battery, 1 piece
7. Duration of operation: approximately 6 months (when the battery is fully charged and the power save is not activated)
   - Approximately one year and a half at maximum when the power save is activated after the battery is fully charged.
   - Automatic reception (before 2:00 a.m. and 4:00 a.m.)
     - It varies depending on the radio signal receiving condition.
     - After radio signal reception, the watch will start to work depending on the quartz movement until the next reception.
9. Integrated circuit; oscillator, frequency divider, drive and reception circuit: IC, 2 pieces
   - The specifications are subject to change without notice due to product improvements.
